PROJECTS

AI Knowledge & HR Copilot

NestJS, PostgreSQL, pgvector, Google Gemini

06/2026 – 07/2026

- Developed an internal AI Knowledge & HR Copilot from scratch using a RAG pipeline with document chunking, embeddings, and HNSW-indexed vector search.
- Designed a two-layer hallucination-refusal system combining similarity-threshold validation and context-grounded generation.
- Implemented Gemini-based, JSON-schema CV extraction and a deterministic 0–100 skill-matching algorithm.
- Developed RBAC with team-scoped permissions, hybrid semantic and keyword search, and Jest unit and live-database E2E testing.

MedFlow – Healthcare SaaS

Spring Boot, React, PostgreSQL, WebSocket/STOMP

06/2026 – 07/2026

- Co-built a full-stack healthcare SaaS modular monolith in an 8-week MVP, with Liquibase migrations and GitLab CI/CD.
- Implemented JWT authentication with rotating refresh tokens and role-based access control across patient, doctor, secretary, pharmacy, and admin roles.
- Developed appointment booking, e-prescriptions with QR-verified pharmacy fulfillment, and inventory management with concurrency-safe dispensing.
- Built real-time doctor–patient chat with WebSocket/STOMP, notifications, and an audit trail for sensitive actions.

Urban Traffic Management Platform

NestJS, GraphQL, Next.js, PostgreSQL, Docker

- Designed a microservices architecture with a GraphQL API Gateway.
- Implemented JWT authentication and role-based access control.
- Developed interactive map visualization and incident reporting features.
- Containerized services using Docker and automated deployment workflows.

Tourism Exploration Application – TuniWay

Spring Boot, Angular, MongoDB

- Developed a full-stack tourism platform for discovering destinations, restaurants, cafés, tours, and local guides across Tunisia.
- Implemented JWT authentication, role-based access control, reviews, and an administrative dashboard.
- Integrated an AI chatbot and designed the application architecture using Spring Boot, Angular, and MongoDB.

PROFILE

Software Engineering & Information Systems engineering student passionate about designing and developing structured, scalable, and user-oriented software systems. Particularly interested in application architecture, full-stack development, and building digital solutions that solve real organizational problems. Curious and motivated, I enjoy environments where I can learn quickly, tackle technical challenges, and contribute to impactful collaborative projects.

PROFESSIONAL EXPERIENCE

Software Engineering Intern - Remote

MedFlow

06/2026 – 07/2026

- Worked in a team of three to build an 8-week healthcare SaaS MVP, covering authentication, appointments, prescriptions, pharmacy, messaging, and administration.
- Shipped to production through GitLab CI/CD with Liquibase migrations.

Software Engineering Intern - Remote

PlaySoft

06/2026 – 07/2026

- Developed an internal knowledge and HR platform powered by AI.
- Implemented core backend functionality for document retrieval, CV analysis, and knowledge management.

End-of-Studies Internship

The Bridge (9antra)

02/2024 – 04/2024 | Tunis

- Developed a mobile application using Flutter with a web-based admin interface.
- Used Firebase for backend services and real-time features.
- Worked in an agile team and contributed to multi-platform deployment.
- Technologies: Flutter, Firebase, Flask

TECHNICAL SKILLS

Programming Languages

Python - JavaScript - Java - C++ - C#

Frameworks & Technologies

Angular - Flutter - .NET /ASP.NET Core - Spring Boot - Node.js - Next.js - GraphQL - NestJS

Databases

PostgreSQL - MySQL - MongoDB - Firebase - pgvector

Tools & DevOps

Git - GitHub - Docker

Operating Systems

Linux - Windows

AI & Big Data

RAG - Google Gemini - Apache Spark - Hadoop HDFS - Power BI

LANGUAGES

English

French

Arabic

EDUCATION

Engineering Degree in Software Engineering and Information Systems

Tek-Up

2024 – Present

Bachelor's Degree in Software Engineering and Information Systems

Faculté des Sciences de Monastir

2021 – 2024
